

Hi Fellow Trader:

We are excited about this new service we are offering during our Beta launch called “MAANNG In 5-10-Minutes.” Ok, so what is it?

We know that many of you may already have a primary trading strategy for the “Big 6” technology stocks (META, AAPL, AMZN, NFLX, NVDA, GOOG). However, there may be times when unexpected market cycles (TSS Cycles) can catch you off guard. Understanding these cycles can guide you to better entries and exits.

We won't bore you with lengthy video analyses of these cycles. Instead, we aim to provide concise 5-10-minute sessions twice a week. Think of it as guardrails on a sharp curve in the road ahead.

In addition to short-term intra-day hourly and 5-minute cycles, some of the other TSS cycles, we also pay attention to longer multi-month and yearly cycles. Ignoring these cycles could cause you to miss significant trend shifts and leave you trailing behind if prices move rapidly off these turning points.

If the cycle analysis is extensive in a given week, we might cover META, AAPL, and AMZN on Tuesday, and NFLX, NVDA, and GOOG on Thursday.

You can learn more about these hidden cycles [HERE](#)

You can also discover more about Big Kahuna Wave Trading [HERE](#)

You can access the MAANNG In 5-10-Minute report usually by 10-PM Tuesdays and Thursdays through our Twitter feed at www.Twitter.com/kahuna_club Make sure to enable notifications so that you don't miss out.

After watching the videos, you might gain a whole new appreciation for cycle-based trend lines. During this period, we strongly recommend using a trade simulator until you become comfortable with this trading style.

Pay close attention to the overall market sentiment. In a volatile market like this one, we suggest only trading with 25% of your account until you become proficient with this new approach. Even then, consider limiting the maximum trade amount to 20% of that 25% (e.g., if you have a \$100K account, trade with \$25K, and restrict your position size to a maximum of \$5K per trade). If you incur a 50% loss on a position, the maximum portfolio exposure would be \$2,500 or 2.5% of your overall portfolio.

Pay attention to the overall market demeanor and know that in a sketchy market (this is one) you should only trade with 25% of your account until you get up to speed with any new style of trading.

And even at that, ideally limit maximum trade amount to 20% of that 25% (Ex: \$100K account-trade with \$25K and limit position side to a maximum of \$5K per trade). If you take a 50% loss on a position, then the maximum portfolio exposure would be \$2500 of the overall portfolio or 2.5%.

Despite prevailing macroeconomic challenges, such as a bloated federal deficit, high inflation, and high interest rates, these uncertainties persist, and it's challenging to predict what it will take to stabilize the market. In light of this, we aim to trade based on what we observe, rather than what we assume.

We will gauge the level of interest in this service to determine if it can operate as a standalone service. If you find value in our analysis, please consider sharing it with your social media network. Your support may lead us to prioritize this report when we fully launch our trading club in 2024.

We take pride in the work we've put into this system, and we believe you'll appreciate its power and simplicity. If you like what you see, we'd greatly appreciate it if you could spread the word about TSS Cycle Trading and the Big Kahuna Trading Club!

If you have any questions that aren't answered on our website, feel free to contact me at the email address below.
